The Excellence in Concrete Awards are presented each year by the Concrete Promotional Group (CPG) to recognize outstanding work in concrete construction. CPG is a non-profit trade association representing the concrete industry in the Greater Kansas City area promoting quality concrete construction.

The pavement for this project is a heavy-duty design to withstand regional temperature extremes and the daily traffic volumes on Jayhawk Boulevard including hundreds of transit bus trips. It consists of 8 inches of micro-fiber reinforced, doweled-joint concrete meeting Kansas City Metro Materials Board specifications for 5000 pounds per square inch strength at 28 days. The concrete is underlain by 12 inches of granular rock base and compacted subgrade.

The sidewalks were constructed with a distinctive “window paning” joint pattern matching the historical design. In addition, generously proportioned sidewalk ramps meet current ADA requirements and accommodate the high pedestrian volumes. A transit plaza in front of Snow Hall accommodates large numbers of bus riders and several busses queued at a time.
